In terms of alphabetical order, indices in transcription are treated as if they were without diacritics. ‘āyn precedes ‘a’, and hamzah precedes ‘āyn. Forms with word-initial hamzah are listed under the following vowel. Where reference is to two or more of the descriptive chapters (multiple references), the Roman numbering (of the chapters) does not precede the numbering of the paragraphs referred to. Where reference is to only one of the descriptive chapters, the Roman numbering does precede the paragraph numbers. Such single references are listed following the multiple references. E.g., a multiple reference 1.2.3/4. refers to chapters I, II and III, paragraphs 1.2.3. and 1.2.4.

‘ād, 4.12
‘ālam + suffix → interogatives
a: initial— → initial a
a-insertion → phonotactics,
ghahawah-syndrome
