‘We have been Informed that the French are Carrying Desolation Everywhere’: The Desolation of the Palatinate as a European News Event

Emilie Dosquet

After the fall of Philippsburg, the Dauphin went into the Palatinate which he subjugated entirely. He seized by Siege Manheim, Frankenthal & Heidelberg. The towns of Worms, Spire, Oppenheim & many others opened their Doors without resistance. But these towns of Worms, Spire & Oppenheim, which gave themselves up to the French, & prided themselves on being treated according to the common laws of War, experienced a cruel fate, more terrible than that of Heidelberg; because they were not only completely destroyed and consumed with fire, but besides that, the overly credulous Inhabitants, who had taken their main personal effects to put them in a safe place, fell prey to pillage & the fury of the Soldier. Since we have seen the description of it in the public News, I will skip the details of the cruelties & inhumanities which are capable of touching the most insensitive hearts.1

Borrowed word for word from the eleventh issue of the “historical and political mercure” Lettres sur les matières du temps dated 15 June 1689, these few lines of Henri de Limiers’ Histoire de Louis XIV constitute a narrative of what the author

1 [Henri de Limiers], Histoire de Louis XIV. Roi de France et de Navarre. Où l’on trouve une Recherche exacte des Intrigues de cette Cour dans les principaux États de l’Europe. Par H. P. D. L. D. E. D. (Amsterdam, 1717), vol. 4, p. 282: “Après la prise de Philippsbourg, le Dauphin entra dans le Palatinat qu’il réduisit entièrement. Il s’empara de Manheim, de Frankenhal & d’Heidelberg par des Sièges formez. Les Villes de Worms, de Spire, d’Oppenheim, & quantité d’autres ouvrirent ensuite leurs Portes, sans faire aucune résistance. Mais ces mêmes Villes de Worms, Spire & Oppenheim, qui s’étoient rendues aux François, & qui s’étoient flatées qu’on ne les traiteroit que selon les Loix ordinaires de la Guerre, éprouvèrent néanmoins une desti¬née cruelle & plus terrible, que ne fut celle d’Heidelberg; puisque non seulement elles furent entièremen détruites & consommées par le feu; mais qu’outre cela les Habitans trop crèdules, qui en avoient emporté leurs principaux éfets pour les mettre en sureté, furent la proïe du pillage & de la fureur du Soldat. Comme on en a vû la description dans les Nouvelles publiques; je passerai sur ce détail de cruautez & d’inhumanitez capables de toucher les cœurs les plus insensibles”.
called “the hostilities of France against the Empire” at the beginning of the Nine Years War (1688–97). By placing news at the heart of history with a *mise en abyme* between historical writing and periodical writing, this narrative brings the reader, almost 30 years after the fact, from “public News” to history through printed news, into the making of a historical event, namely the desolation of the Palatinate.

Having besieged Philippsburg and taken the principal fortress-cities and walled towns on the Rhine in autumn 1688, the Sun King’s army implemented a large-scale, systematic scorched-earth policy from Cologne to Freiburg, combining three well-known tactics of the time: tax collection, ravages, and the dismantling of fortifications. This strategy, ordered by Louis XIV and based on the importance of logistical issues for the European warfare of the time, had a double objective. The first was fairly standard: to supply his own army while disrupting the enemy’s supplies and communications. But primarily, in the context of a global policy of ‘aggressive defence’

---

since the Dutch War (1672–9) that aimed to protect the French territory by securing its borders, the Sun King wanted to establish a true ‘buffer zone’ to prevent any enemy intrusion into the realm. As soon as they occupied the main part of the Upper and Middle Rhine territories of the Holy Roman Empire, the French troops levied so-called contributions—namely taxes in cash and in kind—which they enforced with hostages and the threat of burning. French troops also conducted several raids in unoccupied territories on the right bank of the Rhine, as far away as Swabia and Franconia. From October, Louis XIV and his Secretary of State for War Louvois planned the imminent retreat to the line of French citadels on the Rhine’s left bank. At this point, the officers were ordered to ravage the country and destroy all unused resources to deprive the enemy of any means of subsistence. Above all, Louis went to the extreme of planning and implementing the complete destruction of the main strategic fortress-cities and walled towns, foremost among them Heidelberg, Mannheim, Speyer and Worms. This strategy was implemented from the Electorates of Trier, Cologne and Mainz in the north to the Margraviates of Baden and the Duchy of Württemberg in the south, mostly in the Electoral Palatinate as well as the bishoprics of Worms and Speyer. But a precise geography, as well as an accurate chronology, is hard to establish. This systematic destruction was carried out for nearly a year, between the autumn of 1688 and the autumn of 1689. Nevertheless, small operations were waged occasionally over the next several years, until the invasion of 1693 and the second destruction of Heidelberg.
This “extreme application of standard military practices” shocked the Sun King’s contemporaries.\(^8\) Indeed, as soon as they occurred, these military operations were brought to the attention of the European public in various forms of printed news—periodicals, accounts, broadsheets, pamphlets, and so on—mostly in French, English, German and Dutch. Those reports raised a scandal and the facts they described became a meaningful and distinct episode in the war, known today as the devastation or desolation of the Palatinate. These series of French military operations thus constituted an event, i.e. an historical unit, which is detached from the everyday continuity of the war and seen instead as a remarkable discontinuity. The event emerged from a process that united a series of geographically and chronologically scattered military actions under a common name. To understand this event, it is necessary to unpick the process of its construction, in which print plays an essential role. Indeed, the event resulted both from the fact that the French military operations belonged to a coherent strategy and that as soon as they occurred, they became integrated within news networks, which processed them on several scales. In a media landscape characterised by interdependence, intermediality and intertextuality, the work of unpicking this construction rests on a cross-analysis of the shape and spread of printed news on local, national and international scales to highlight the role of the many exchanges, mostly intertextual—both intra- and intermedia—which characterised news networks, and contributed to the making of so-called “European” news. Because of their asserted European nature, the remarkable resonance of the French military operations enables us to examine the impact of a developing information network in Europe and to comprehend the shape of so-called transnational news: that is, news resulting from systemic exchanges on different scales.\(^9\) This assertion also allows us to assess the European dimension of a gathering opposition to Louis XIV from the 1670s, an opposition in which historians have noted “a remarkably uniform ideology”.\(^10\) This paper offers

---

\(^8\) Lynn, ‘A Brutal Necessity?’, p. 100.

avenues of analysis for an “histoire croisée” or “cross-history” of an event within the “media tetrahedron” of early modern Europe—i.e. England, France, the Dutch Republic and the Holy Empire—with the aim both of apprehending the process by which the event was constructed, and of discussing its characterisation as “European”.11

At a time when the flow and density of information were increasing, the periodical nature and text structure of printed news were fundamental to an understanding of the constitution of the French military depredations as an event.12 In this regard, weekly periodicals, which were the first printed news publications that reported facts with reasonably high frequency and regularity—once to five times a week, depending on the periodicity of the newspapers—played an essential role in the making of the event. For clarity and representativeness, this study will be based initially on a French-language gazette, the biweekly Nouveau Journal Universel—an ancestor of the famous Gazette d'Amsterdam—published in Amsterdam by two exiled Huguenots,
Claude Jordan and Jean Tronchin du Breuil. The *Nouveau Journal Universel* was one of the most important French-language gazettes regularly published in the Dutch Republic at the beginning of the Nine Years War. These French-language gazettes or “*gazettes de Hollande*” were the most international periodical of the time, emerging from the Dutch book trade’s dynamism in the area of francophone production. This made the Dutch Republic the centre...
of European information.16 These French-language gazettes were, like the English- and German-language weekly newspapers, all made up of seemingly raw information that was juxtaposed to form dated bulletins consisting of a succession of relatively basic utterances, organised in geographical columns with minimal or indeed with no editorial comment. In his work concerning French-language gazettes and the notion of event, in particular in his book on Damiens’ attempted assassination of Louis XV in 1757, Pierre Rétat demonstrates that this synchronic and diachronic juxtaposition formed a segmented narrative.17

Following similar reasoning, from autumn 1688 and for several months, news periodicals formulated a series of narrative utterances or “micro-narratives” which were, in a more or less fragmented manner, sketching, by their very periodical nature, a narrative of the French military violence in the Rhenish territories that was discontinuous but coherent. In order to give an outline of this narrative sketch or “primary narrative”, let us follow it in the Nouveau Journal Universel over a few days, between Thursday 6 and Monday 13 January 1689.18

NEWS FROM THE EMPIRE AND NEIGHBOURING COUNTRIES.

Extract from the Letters from Frankfurt of Decemb. 29. 1688.

Rumour has it that the French have mined the doors & fortifications of Heilbron & some other Cities to blow them up before abandoning them; it is more certain that they have burned lots of Villages, & all the hay & straw that they have found in the Fields of the Country of Wirtemberg.... There are once again 4. Companies of Dragoons that entered Heidelberg. The Delegates, whom this City sends to Paris to complain about the abuses that the Troops commit there, were made most welcome by Madame d’Orleans, and the King has advised them that he will have their case to examined. The French are ruining all the fortifications & the walls of Manheim, & getting its ditches filled in: we bring out of it all the cannon & ordnance. They demand 80000. Écus to

NEWS FROM THE EMPIRE AND NEIGHBOURING COUNTRIES.

... 

Extract from the Letters from Frankfurt of January 2. 1689.

All the letters of the surrounding Cities & States say, that the news of the happy success of the undertaking of His Royal Highness the Prince of Orange comfort them a little for the damage that the French are causing in all this Country. The soldiers are always insolent; but there are those who are more than the others: We send from Mainz, that Mr Bertram, Secretary of the Elector being gone, we have ordered him, that if he did not come back to his home, we will pull it down, & hang his son whom we are detaining there: it is easy to judge that these are threats made to attract their host, rather than out of any wish to carry it out. There are 3500. Dragoons who have gone to the County of Ubingen to burn the Country or to claim Contribution. 20

NEWS FROM THE EMPIRE AND NEIGHBOURING COUNTRIES.

... 

Extract of the Letters from Frankfurt of January 5. 1689.

20 nju, 16 (10 January 1689): “Nouvelles de l’Empire et Pais Voisins … Extrait des lettres de Francfort du 2. Janvier 1689. Toutes les lettres des Villes et États circonvoisins disent, que la nouvelle de l’heureux succès de l’entreprise de Monseigneur le Prince d’Orange, les consolait un peu du dégât que les Français font dans tout ce Pays-là. Les Soldats sont toujours insolents; mais il y en a qui le sont plus les uns que les autres : On mande de Mayence, que le Sieur Bertram, Secrétaire de l’Électeur s’étant absenté, on lui a fait faire commandement, que s’il ne revenait pas dans sa maison, on l’allait mettre bas, & pendre son fils qu’on y détient : il est facile de juger que ce sont des menaces plutôt pour attirer leur Hôte, que pour les vouloir mettre en effet. Il y a 3500. Dragons, qui sont alles dans le Comté d’Ubingen, pour brûler le Pays ou le mettre sous Contribution”.

... We have news that as the Saxons approached the French had abandoned Heilbron & all the Country of Wirtemberg; We wait from it for the specifics with the confirmation: however the public voice is, that the French had blown up the doors & parts of fortifications of Heilbron, that they had plundered the City, & set fire to every corner before abandoning it, & there are Passengers who are saying that they have seen the flames of Churches from over than 2 & a half leagues. Mr de Monclar arrived the past 26th in Speyer: He had seized & sold all the wine of the Bishopric: Mr Bel Croy had made an exact account of the incomes of the Lazaret of Speyer: Mr de la Grange had all the papers of the Chamber of Speyer visited which were brought to Strasburg, to see if we could not find anything that concerns the affairs of Burgundy, or other countries, that could be used by the Crown of France on occasion. We made the same search in the Bishopric Archives of the City, & because the Chancellor was an obstacle to this, the French have forbidden him to make any use of his Office as long as this search was not made. The Troops, which we said in the previous Journal had crossed the Rhine under the command of Mr de la Breteche, have been in the Country of Nassau & Solms, where they have burned & plundered many Villages; & not satisfied with this cruelty, they have taken the foodstuffs of the Peasants, such as their wheat, their flour, their grain, &c. & they have thrown it down pell-mell on the street, & have blended ashes with the flour, for fear that these good people salvage something from it: it is easy to judge the despair, considering that this treatment makes their condition more miserable than that of galley-slaves. The soldiers have brought the cattle, & loaded up the horses even with the salted pigs of these wretches.21

21 *NJU, 17* (13 January 1689): "Nouvelles De l'Empire et Pais Voisins ... Extrait des lettres de Francfort du 5. Janvier 1689 ... On a nouvelle qu'à l'approche des Saxons, les François avoient abandonné Heilbron et tout le Pays de Wirtemberg : On en attend les particularités avec la confirmation : cependant la voix publique est, que les Français avoient fait sauter les portes et parties des fortifications de Heilbron, qu'ils avoient pillé la Ville, et mis le feu aux quatre coins avant de l'abandonner, et il y a des Passagers qui disent avoir vu les flammes des Églises de plus de deux lieues et demie ... M. de Montclar arriva le 26. du passé à Spire : Il a fait confisquer & vendre tout le vin de l'Évêché : M. Bel Croy a fait un état exact de tout le revenu du Lazaret de Spire : M. de la Grange fait visiter tous les papiers de la Chambre de Spire qui ont été portez à Strasbourg, pour voir si l'on n'y trouvera rien qui concerne les affaires de Bourgogne, ou autres, qui puissent servir à la Couronne de France dans l'occasion. On fait la même perquisition dans les Archives de l'Évêché de la Ville, & comme le Chancelier y était en obstacle, les Français lui ont fait défense de faire aucune fonction de sa Charge, que cette recherche n'ait été faite ... Les Troupes que nous avons dit dans le Journal précédent avoir passé le Rhin sous le
An event being both the elementary component of a continuity of occurrences (everything that occurred and thus in itself insignificant) and the manifestation of a discontinuity in this continuity of occurrences (and thus noteworthy), the weekly newspaper was the privileged medium of this event dualism.\textsuperscript{22} Indeed, these periodicals continually combine the ordinary and extraordinary. They related facts that were considered noteworthy enough to be printed but at the same time the large majority of them belong to the ordinary political information that constituted the bulk of this type of printed news. Thus alongside accounts of remarkable facts (or facts related as such), weekly newspapers offered a ritualised information, consisting of kings and princes’ courts, religious events, aristocratic births and deaths, arrivals and departures of commercial ships and convoys, movements of troops, battles and sieges. War thus belonged to this ordinary political information and accounts of military operations thus constituted an important part of this type of printed news.\textsuperscript{23} Besides, from the earliest examples of printed news, war was a major subject and wartime usually led to an increase in news production.\textsuperscript{24} The ordinary war of the printed news was far from being devoid of violence, and the news also related an ordinary military violence, especially against civilians. As the \textit{Nouveau Journal Universel} reported, this ordinary military violence consisted of forced billeting of soldiers, raids and contributions.

\begin{quote}
commandement de M. de la Breteche, ont été dans le Pays de Nassau et de Solms, où ils ont brûlé et pillé plusieurs Villages ; et non contents de cette cruauté, ils ont pris les denrées des Paysans, comme leur bled, leur farine, leurs grains, etc. et l’ont jette dans la rue pèle–mêle, et ont mêlé de la cendre avec la farine, de peur que ces bonnes gens n’en réchappassent quelque chose : il est facile de juger du désespoir, vu que ce traitement rend leur condition plus misérable que celle des Galériens. Les Soldats ont amené le bétail, & chargé sur leurs chevaux jusqu’aux cochons salez de ces misérables”.
\end{quote}

\textsuperscript{24} See, e.g.: Mario Infelise, ‘The War, the News and the Curious: Military Gazettes in Italy’, \textit{Politics of Information}, ed. Dooley and Baron, pp. 216–36.
But alongside this a recognisable extraordinary warfare gradually emerges, consisting of what the printed news suggested, implicitly for the most part, was an extraordinary military violence. The key point is not whether this military violence was in fact exceptional, but to notice that it was reported as such. As a result, and in accordance with the event-nature of periodical printed news, which combines apparently exhaustive banality and selective singularity, the newspapers reported the French military operations as a dialectic of ordinary and extraordinary news of the war. Incidentally, the gazetteer noted in the news from The Hague of 12 January that the ongoing military operations disrupted the seasonality of the news:

> The news has never been more abundant from all sides than it is at present, because instead of the other years the gazetteers could these days only speak about some winter quarters, some preparations which were made for the Campaign: today we only hear tell of movements, armies that comb the countryside, besiege, take, plunder, burn Cities ...

Although this war-extraordinary was made explicit through the narrative of cities’ destructions and the use of a rhetoric of the indescribable, it was the text-structure of printed periodical news which played an essential part in the implicit distinguishing of the French military operations from the ordinary of war. Continuously confronted with the uncertainty of the facts they reported, gazetteers wholly integrated this contingency into their informative function through numerous rhetorical processes. As the case of Heilbronn shows, the facts under the newswriter’s pens became “hesitating realities”. And this permanent formulation of uncertainty defined the foundational distinction between history as “the narrative of things that

---

26 *NJU*, 17 (13 January 1689): “Les nouvelles n’ont jamais été plus abondantes de toutes parts qu’elles le sont présentement, car au lieu que les autres années dans ce temps ici, les nouvelles ne pouvoient parler que de quelques quartiers d’hiver, de quelques préparatifs qui se faisaient pour la Campagne : aujourd’hui on n’entend parler que de mouvements, que d’Armées qui battent la campagne, assiègent, prennent, pillent, brûlent des Villes”.

happened” (“le recit des choses avenües”) and the gazette as “only the rumour coming from it” (“seulement le bruit qui en court”). The gazette was the place where the rumour of French military violence—past, present, or future—was repeatedly formulated. While Louis XIV hesitated, over the course of several months, to raze Trier and subject it to the same measures as the other destroyed cities, printed news, issue after issue, related the fear of the inhabitants and the rumour of an eventual razing that did not finally occur. Finally, the repetitive nature of the French military operations, as well as the more lasting quality of the dismantlings themselves, reinforced the repetitive structure of the news that resulted from their text-structure and periodicity. This double repetition helped to represent French strategy as a process of never-ending destruction.

Thus, gradually, with the necessary hindsight, an event-unit detached itself from this dialectic, because, as Reinhart Koselleck writes, “a minimum of ‘before’ and ‘after’ constitutes the significant unity that makes an event out of incidents”. Hence, printed news progressively reported the French military actions as part of an ongoing event, which they were shaping by naming it. Thus the news from the Empire of 21 March announced that: “La désolation des Peuples du Palatinat continuë, & on auroit de la peine de donner ici une juste idée de leur misére.” (“The desolation of the Palatinate's People continues, and we can hardly give a good idea of their misery.”). Because they were published monthly rather than weekly, the “historical and political mercures” benefitted even more from this necessary hindsight. The seventh issue of the Amsterdam Lettres sur les matières du temps of Jean Tronchin du Breuil dated 31 March reads as follows:

Mais je ne puis m'empêcher auparavant de m'arrêter un peu sur un fait des plus remarquables qui vient d'arriver, & qui ne refute que trop solennellement tout ce qu'on peut alléguer en faveur des desseins & des intentions de la France : Je parle de la dernière désolation qui vient d'être exercée dans les Villes du Palatinat, & particulièrement à Heidelberg, lors que les troupes françaises en sortirent le 3 de ce mois, en y laissant des

29 Gazette, Relation des nouvelles du monde receuës tout le mois de mars 1632 (1 April 1632).
31 NJU, 37 (21 March 1689).
monuments de fureur & de barbarie, que les précédentes guerres n'avoient point connu.33

(I cannot forbear, first of all, dwelling a little upon a very remarkable Thing that has newly happen'd, and which does but too solemnly refute all that can be alleadg'd, in favour of the Designs and Intentions of France. I speak of the late Desolation that has been made in the Cities of the Palatinate, and particularly at Heydelburgh, when that the French Troops departed thence on the 3d. of March, leaving there those Monuments of Fury and Barbarity, which former Wars were unacquainted withal.)

In this “historical and political mercure” in the form of an epistolary fiction, the author clearly states the event-nature of the French depradations by asserting their exceptional character and by using the same terminology as previous newspapers to give a name to the facts. Through this act of naming, printed news took part in the crucial process of selection and concentration that progressively made of the facts a whole.34 Here, this process went through a geographical simplification focused on the Palatinate.35 Indeed, although the other territories affected by more or less important French military operations were mentioned several times, the expression “the Palatinate and other countries” came to be employed more and more often. Furthermore, the newspapers started to publish news directly entitled “From the Palatinate”, reinforcing the focus on this geographical space.36 The Palatinate, which was central to the French strategy, overshadowed the other Rhenish territories and so gradually became the reference point.

Above all this “primary narrative” was formulated by the cross-border spread of a news network. The newspapers drew in particular upon

35 We should note the ambiguity of the term “Palatinate”, which refers at once to a dynastic space, a territorial space and a geographical space, that are not perfectly equivalent. On this matter, see Hansjörg Probst, Die Pfalz als historischer Begriff (Mannheim: Südwestdt. Verlagsanstalt, 1984).
36 See for example the Habsburg Netherlands’ Relations Véritables (RV), but also the Hamburg Nordischer Mercurius (NM).
correspondents’ manuscript newsletters from different countries: therefore printed news was structurally transnational. It belonged to an intertextual network, across languages and spaces, within which it sustained itself by numerous combined exchanges—translations, borrowed expressions, quotations, rewriting, etc.\(^ {37} \) Thus “the vagaries of news transmission across time and space [were] almost infinite” and so very difficult to identify. Among the multiple mechanisms of news dissemination, which was characterised by varying degrees of rewriting, translation is one of the most important.\(^ {38} \) For instance, I established that the briefly-appearing London *mercure* entitled *The Dilucidator* was in fact a word-for-word English translation of the seven issues of the *Lettres sur les matières du temps* published originally between January and April 1689 that mentioned the French military operations several times.\(^ {39} \) However, the mechanisms of news dissemination are rarely so easy to identify. So for example, the “micro-narrative” of the destruction of Heidelberg in the February 1689 issue of the German-language *mercure*

---

---

---

entitled *Europäischer Mercurius* was very similar to that of the 35th issue of *Nouveau Journal Universel* of 14 March. Whether this was directly borrowed news, and how many intermediaries it passed through, is impossible to determine. Similarly, there was certainly a link between the Frankfurt news dated 12 December contained in the fourth issue of the *Universal Intelligence* printed by John Wallis in London, in the context of the Glorious Revolution when a press “without allowance” developed beside the official *London Gazette*, and that in the 10th issue of the *Nouveau Journal Universel*. Indeed, the first was a short and synthesised version of the second. Was it from the same correspondent? At the very least it was likely to be borrowed news, because John Wallis had seemingly not previously published newspapers and so most probably did not yet have a network of correspondents. But how many rewriting steps and missing links were there between these two versions of the Frankfurt news? Likewise in the *London Gazette*, the Frankfurt news of 17 March seemed to mix the Frankfurt news of 9 and 17 March from the *Relations Véritables*—the most important French-language gazette of the Habsburg Netherlands, which played the role of an official organ—and that of 13 March from the *Nouveau Journal Universel*. Once more, printed news was rewritten, selected and concentrated through multiple stages of dissemination whose precise nature was hard to determine. But in any case, this complex compilation of borrowed news on which printed periodicals were based played a major part in the making of a shared “primary narrative” of the

French military operations. Though irreducible dissimilarities existed in the ways news was processed, according to the different publishing paradigms and ideological commitments of editors, they shared a common interest in contemporary events.⁴³ Therefore, at a time when commonality was increasing, that is to say that “the number of people simultaneously reading or discussing variants of the same news” expanded, and with it the “potential for contemporaneity”, the French military operations, reported by French-, English-, and German-language periodicals, belonged from then on to a kind of cross-boundary ‘shared topicality’, which manifested, besides dissimilarities, important similarities and points of convergence in the processing of this specific news.⁴⁴

In addition, printed news also laid the foundations of the event-structure by defining its elementary sequences: indeed, an event can be comprehended as textually structured according to a referential narrative thread.⁴⁵ In the case of the French military operations, these elementary sequences of which the event was made up took in particular the form of the destruction of cities. So the referential narrative thread focussed on some of the main fortified towns demolished by Louis XIV’s army, namely Heidelberg, Mannheim, Speyer, Worms, and Oppenheim. This “event-sequencing” was also typographically emphasised in the English newspapers, where the names, usually printed in italics, underline this sequencing by cities. Likewise, in the Europäischer Mercurius, the news took the form of a narrative punctuated by the bold and centred names of the various cities reported on in turn: in its

⁴⁴ Woolf, ‘News, History and the Construction of the Present’, p. 83; Dooley, ‘Introduction’, in Dissemination of News, p. 2. It is no surprise that Renaudot’s Gazette, which played the role of an official organ for the French monarchy, distinguishes itself from the other periodicals by its silences: nevertheless the raids, levies of contributions, military executions, collects of fodder, ravages of the fields, and dismantling of fortifications that are related punctually, here and there in these French printed news, outline the ordinary war (i.e. both the military practices and violence) of the printed news. On Renaudot’s Gazette, see Gilles Feyel, ‘Gazette [de France]’, in Dictionnaire des journaux, ed. Sgard; Feyel, L’annonce et la nouvelle; Haffemayer, L’information dans la France du xviiie siècle.
several 1689 issues, it consecutively related the French military operations to which the Rhenish cities were subjected. Furthermore, in response to the course of French military operations, the printed news reported successively in March the demolition of both Mannheim and Heidelberg, which were linked from the start in the design and implementation of the French strategy, and at the beginning of June the simultaneous destruction of Speyer, Worms and Oppenheim. Hence, the sequencing organised itself also from the start in groups of towns. On 3 June the Marquis de Dangeau, the Sun King’s courtier, already noted in his Journal: “On a fait brûler Spire, Worms et Oppenheim” (“We had burned Speyer, Worms & Oppenheim”). In his issue dated 30 May (8 June), the important German-language Nordischer Mercurius, published in Hamburg by Friedrich Conrad Greflinger, reported that: “Vergangenen Dienstag haben die Frantzosen die Städte Speyer/ Worms und Oppenheim angezündet” (“Last Thursday the French have set fire to the cities of Speyer, Worms and Oppenheim and laid them in Ashes”). The Frankfurt news of the 8 June issue of the Relations Véritables announced that: “l’on a vu en flames Openheim, Vorms, Spire, & autres Places” (“we have seen Openheim, Vorms, Spire, & other Places in flames”). Likewise the Cologne news in the London Gazette related that the French “have now lately reduced to ashes the Cities of Spire, Worms and Oppenheim, there not being left in these famous Places one House standing”. The section of the 15 June issue of the Lettres sur les matières du temps borrowed by De Limiers referred to this same grouped sequence. And while a German relation relates their simultaneous destruction, the Europäischer Mercurius designed a similar news sequence announced with a bold and centred heading of “Speyer/ Worms und Oppenheim” to recount it. Hence this narrative grouping became a typical characteristic of the representation and the narrative of these cities’ destruction. In their series of eleven sepia drawings commissioned by the Worms town council to illustrate the account of Worms’s demolition, the counsellor Peter Hamman and his son Johann Friedrich chose to

47 NM, 84 (30 May 1689); RV (8 June 1689); LG, 2458 (30 May—3 June 1689).

49 EM, Majus. Anno M. DC. LXXXIX., p. 78.
represent the triple destruction as an inseparable whole (see Figure 28.1).\textsuperscript{50} Finally this sequencing by cities became in later accounts and pamphlets the basic referential narrative thread of the event.\textsuperscript{51}

\textsuperscript{50} Fritz Reuter, Peter und Friedrich Hamman. Handzeichnungen von Worms aus der Zeit vor und nach der Stadtzerstörung 1689 im Pfälzischen Erbfolgekrieg (Worms: Bessler, 1989).

\textsuperscript{51} See for example the German account: Die Betrübte und Zerstörte Chur–Pfaltz/ welche Die Barbarischen und Tyrannischen Frantzozen an Heydelberg/ Mannheim/ Speyer/ Worms/ Franckenthal und Landau, Mord–brennerisch und unchristlich in die Asche geget (n.p., 1689); among the pamphlets, see for example an important French–language brochure that was published in 1689, probably in Amsterdam, of which we identified at least three different editions. The edition quoted here is: La Verite Chrestienne a l’audiance de roy tres–Chretien ([Amsterdam?], 1689), pp. 42ff. This brochure was then respectively translated into Dutch and German: De Christelyke Waerheyt, Getoont ter audientie van den Alder–Christelycksten Koning (Amsterdam, 1689), pp. 27ff.; Der Christlichen Warheit gehabte audenis Bey dem Allerchristlichsten König Ludwig dem xiv (n.p., 1690), pp. 33ff. An English translation also exists that presents very interesting cuts compared to the original version: in particular it mentions Speyer and Worms together but deletes all allusions to Oppenheim: A New Declaration of the Confederate Princes and States, against Lewis the Fourteenth (Londres, 1689), pp. 14ff.
“Plurimediality” (Plurimedialität) is a fundamental element of the news event. Here, the making of the event, and especially of the “event-sequencing”, resulted from essential exchanges between media. Although the mercures were no simple compilation of the gazettes, they were in line with them. Likewise, in the German-language area, the publication of some newspaper extracts in the form of independent accounts, as in the case of Speyer’s demolition, shows the permeability of editorial forms. Once again, these inter-media exchanges were transnational. In this regard, the printed accounts of the Rhenish cities’ destructions fundamentally influenced the writing of printed news and so contributed to the event-building process on a European scale. Thus the Mannheim town council commissioned an account of the town’s destruction from a Hanau printer to be published in both German and French, with 500 copies in each. French being probably the closest thing to a common European vernacular, printing as well as translating in French indicates a European horizon for a publication. The prominent case is that of Heidelberg.

53 Hans Bots, ‘Quelques gazettes de Hollande en langue française et le Mercure historique et politique: une analyse comparative’, in Gazettes et information politique sous l'Ancien Régime, pp. 159–68; esp. Brétéché, Les Compagnons de Mercure, pp. 190–3—this is the first systematic work on these ‘mercures historiques et politique’, and on the interrelation between gazettes and mercures.
55 These are very likely the ordered brochures: Relation Und Gründliche Beschreibung der von denen Frantzosen in der Churfürstlichen Pfaltz schön- vor wenig Jahren neu- und durch-auß regular gebauten Stadt Mannheim verübter un–Christlicher Proceduren und erbärmlicher Verwüstung/ im Jahr 1689 (n.p., 1689); La Desolation de la Ville Electorale de Manheim par les Français (n.p., [1689]). The town’s archive was unfortunately destroyed during the Second World War but this information was (anonymously) published at the beginning of the twentieth century: ‘Berichte über die Zerstörung Mannheims durch die Franzosen’, Mannheimer Geschichtsblätter, 2.7 (1901), pp. 165–6.
Introducing a description of Heidelberg’s destruction, the author of the previously quoted seventh issue of *Lettres sur les matières du temps*, addressing his correspondent, wrote: “Vous aurez vu dans les relations publiques” (“You may have seen in the publick Relations”).\(^57\) The author certainly refers here to the anonymously published account of Palatinate councilor Riesman.\(^58\) Indeed, this account was printed and reprinted multiple times in various forms within the Holy Roman Empire, but above all translated into Dutch and English.\(^59\) Incidentally, this account may be one of the missing links to understand the abovementioned similarities between the *Nouveau Journal Universel* and the *Europäischer Mercurius*. This high degree of visibility in print partly explains how the Heidelberg destruction became representative of all the Rhenish cities’ demolition, and more particularly of the French military operations. The *Lettres sur les matières du temps* presented it in this way, as well the English translation of the original account which was entitled *True Account of the Barbarous Cruelties Committed by the French in the Palatinate in January & February last* even though the account related only the French military operations in Heidelberg and around during a single week. So the English account generalised by adopting the geographical focus of the Palatinate and making Heidelberg, the electoral capital, the representative case.

There were also other *topoi*, besides the destruction of cities, around which the news was sequenced and out of which the destruction of the Palatinate emerged as a distinct event. One example is the plundering of the Speyer imperial graves, which was reported in printed news, and then in a number of

\(^{57}\) *LMT*, vol. 2 (31 March 1689), p.97.

\(^{59}\) Besides at least three editions under this original title, this account was also published under another title, *Das Ehmahlig Pracht–gezierte/ Nunmehro Elendig–ruinirte Churfürstliche Residenz–Schloß Heidelberg/ (Augsburg, 1689)*, and in other forms, such as an illustrated broadsheet (*illustriertes Flugblatt*): *Umständliche Beschreibung Der Französ. Grausamkeit in Heydelberg/ ([Nurnberg], [1689]).* Or very often as part of various publications such as accounts and pamphlets, see for example: *Die Waagschale der Frantzosen* (n.p.,1689), pp. 87–9. The Dutch print was *Bericht der Gruweladen Die door de Besetting, of het Garnisoen van de Keur–Palts Hofstad Heydelbergh in dezelve, en de daer onder hoo rende Vlecken en Dorpen, onder het commando van den Brigadier den Grave van Melac, zedert den 28 January tot den 3 February 1689. is bedreven* (Amsterdam, [1689]), the English one *A True Account of the Barbarous Cruelties Committed by the French in the Palatinate, in January and February last* (London, 1689).
pamphlets, to become in the long term one of the symbolic *topoi* of the French military violence.\(^{60}\) Another interesting example is the *topos* of the refugee populations displaced by French military operations. Indeed, besides the people who were spontaneously leaving their home to flee the war and the usual military violence, there were numerous refugees due to the demolition of entire cities, towns, and villages. For example, from January 1689, 6,000 inhabitants of Mannheim were ordered to leave their houses with their goods for Alsace before the city was burned in March.\(^{61}\) Important refugee communities formed in Strasbourg and Frankfurt in particular.\(^{62}\) On 9 June, the Frankfurt news of the *Nouveau Journal Universel* mentioned: “Il est venu quelques passagers de Spire” (“Some passengers came from Speyer”). On 11 June, the *Relations Véritables* related that the Rhenish territories were “remplis des débris des gens, dont les flames ont consumé les habitations” (“full of the remnants of people, whose houses the flames had consumed”). The correspondent then referred to “plusieurs centaines de chariots & de chariots aient déjà passé par ces endroits, sans conter plus grand nombre qui passent encore de l’autre côté du Rhin” (“several hundred carts & wagons already going through these places, without counting the much larger number which are still going on the other side of the Rhine”). On 16 June, the Frankfurt news of the *Nouveau Journal Universel* reported that “Ces familles desolées sont déjà répanduës dans plusieurs endroits de l’Europe, où elles sont errantes” (“These desolate families are already spread in many places in Europe, where they are wandering”).\(^{63}\) The newspapers give here a hint of the importance of word of

\(^{60}\) For the plunder of the Speyer’s graves in contemporary periodical news, see e.g. *RV* (16 July 1689); *NM*, 88 (6 June 1689) and 97 (21 June 1689). For pamphlet reporting of the event, see e.g. *La Verite Chrestienne*, p.44; and its translations: *De Christelyke Waerheit*, p. 28; *Der Christlichen Warheit*, p. 35; *A New Declaration*, p. 15. For the longer historical view, see e.g. Victor Hugo, ‘Lettre xxvii’, in *Le Rhin, lettres à un ami* (Paris: Charpentier, 1845), vol. 2, pp. 317–9.

mouth in the dissemination of news and, in this case, most probably of the crucial contribution of the refugees to the spread of news concerning the French military operations. The “miserable refugees” thus became a central figure of the event: in the polemical literature, these “several thousand souls of all ages and sexes who are running around the world” were henceforth described as “the trumpets which are publishing without concealment or exaggeration, the barbarities, the cruelties, the fires, & the ungodliness that the French committed in the Palatinate” (“Plusieurs milliers d’âmes de tout Sexe & âge qui courent par le monde, font des Trompettes qui publient sans deguise-ment ni exaggeration, les barbaries, les cruautés, les incendies, & les impietés que les François ont commis dans le Palatinat”).

Besides the text-structure, news-writing itself necessarily influenced the event-building process. This news-writing corresponds to a stock of textual and iconographic references made up of stereotypes and interpretative patterns, which were used to represent war and violence in early modern Europe. Here, the argument focuses on French-language printed news, but German- and English-language printed news deployed the same tropes for similar purposes. Among different frames of reference, the biblical was omnipresent: first through the use of the same semantic field as the Old Testament’s relation of destruction by a revengeful God who punished sin with devastation; and second, through an eschatological frame of reference based on the Books of Daniel and Revelation. This last frame of reference is apparent in typical expressions such as the one used by Christ in his eschatological prediction of the destruction of the Temple: “There shall not be left here one stone upon another, that shall not be thrown down” (Matthew 24:2).

64 La Campagne des Allemands De l’Année 1690 (n.p., 1691), p. 57.
65 Besides episodes from Genesis, such as the destruction of Sodom and Gomorrah, and from Leviticus, the principal biblical references are the Latter Prophets Isaiah, Ezekiel, Jeremiah, and Daniel, and the Minor Prophets, Amos and Hosea.
66 We quote here the King James Bible that is the definitive version for seventeenth-century England. The main German–language catholic Bible of the time—i.e. those of Johannes Dietenberger, Johannes Eck and Caspar Ulenberg—use the word–for–word equivalent by adopting the same passive transitive verbal form, i.e. “kein Stein auf dem andern lassen”. The German–language protestant Bible, starting with the Luther Bible, prefers the active intransitive verbal form, i.e. “nicht ein Stein auf dem andern bleiben” (“not one stone remaining upon another”). The French–language Bibles of the time present the same slightly difference but inversely: indeed, the catholic versions prefer the active intransitive verbal form—i.e. “ne pas demeurer pierre sur pierre”—and the protestant version the passive transitive verbal form—i.e. “ne pas laisser pierre sur pierre”.

---
inextricably with the destruction of Mannheim. Indeed, Louvois announced on 17 November 1688 to the Alsace's intendant, La Grange, that Mannheim would certainly be razed “so that there is not left one stone upon another that could tempt an elector” (“de manière qu'il n'y reste pas pierre sur pierre qui puisse tenter un électeur”), and in February he used the exact same turn of phrase to hurry the demolition. On 12 March, the Marquis de Dangeau noted in his Journal about Mannheim that: “on n'y laissera pas pierre sur pierre non plus qu'à la citadelle” (“we will not leave [in the town] one stone upon another, neither in the citadel”). The expression appeared next in the news report concerning Mannheim's demolition by the French troops. The news “from the Palatinate” of the 8/18 March in Nordischer Mercurius related that: “zumahlen sie Befehl haben/ in Mannheim und Friedrichsburg keinen Stein auff den andern zu lassen” (“above all the French are ordered in Mannheim and Friedrichsburg not to leave one stone upon another”). On 2 April, the Relations Véritables reported that: “il ne reste pierre sur pierre de tant de belles Eglises & Edifices qu'il y avoit” (“there is not left one stone upon another of so many beautiful Churches & Buildings”). One week later, the Nouveau Journal Universel reported that the French returned to Mannheim because: “Ils ont ordre de ne pas laisser pierre sur pierre” ("They are ordered not to leave one stone upon another"). Likewise, the so-called “impartial pen” ("unpartheyische Feder") of the Europäischer Mercurius related that they aimed “nach kein Stein auf dem andern bleiben” ("not to leave one stone upon another"). So the expression spread, attached to the sequence of Mannheim's destruction.

Furthermore, the semantic field of fire—“burn”, “reduce to ashes”, “consume”, and so on—which characterised the French military operations became
predominant in printed news where “French” became a synonym for “incendiaries” (i.e. in its older sense—from the French—of “arsonists”). In German pamphlets, the brigadier Ézéchiel de Mélac, one of the French officers who implemented the operations and appeared regularly in printed news, was referred to as the embodiment of “the French murderous incendiary” (“Frantzösischer Mordbrenner”). Henceforth he was always represented with a lit torch against a background of buildings in flames (see Figure 28.2).72 At the same time, as the two engraved frontispieces of both a German and an English pamphlet published in 1690 to denounce the Sun King’s policy and the French methods of warfare in particular show, representations of Louis xiv brandishing a lit torch began to appear (see Figures 28.3 and 28.4).73 Moreover, in several such references, fire was a diabolical attribute associated with the Antichrist.74 In the 28 September 1689 issue of the Relations Véritables, the analogy was obvious to the Mainz correspondent:

Jamais on a oüi parler de tant d’incendies & de desolation. Il semble que tous ces boutefeux soient les précurseurs du dernier Jugement, ou qu’ils prennent à tache de faire consommer avant le tems, les matières qui pourront servir d’aliment au feu qui viendra purifier le monde75

Huge flames rising up to the sky and visible from afar became one of the textual and iconographic aspects of the event. So the seventeenth issue of the Nouveau Journal Universel related that: “il y a des Passagers qui disent avoir vu les flammes des Églises de plus de deux lieues et demie” (“there are Passengers who are saying that they have seen the flames of Churches from further than

73 Der Frantzösische Attila, Ludovicus xiv (n.p., 1690), and The most Christian Turk: Or, a View of the Life and Bloody Reign of Lewis xiv (London, 1690).

74 This importance of arson in the French military operations was for example also polemically exploited through the image of Phaeton’s fall (Ovid, Metamorphoses, I, 750–779 and II, 1–339) that appeared in the print against Louis xiv during the Dutch War. See for example the quotation of Ovid on the front page of A New Declaration (see n. 51 above). See Hendrik Ziegler, Der Sonnenkönig und seine Feinde, pp. 30–4.

75 RV (28 September 1689).
The Desolation of the Palatinate as European News Event

two & a half leagues”). The Hammans’ drawing, like the Vérité Christienne, textually and iconographically interpreted this topic in eschatological terms, as a satanic inversion proving that the French King was the Antichrist. Moreover, the semantic field of fire in printed news accompanied that of

76 See n. 21 above.
77 La Vérité Christienne, p. 43; and its translations: De Christelyke Waerheyt, pp. 27–8; Der Christlichen Warheit, pp. 33–4; A New Declaration, p. 14.
desolation—“desolation”, “desolate”, “devastation”, “make a desert”, “reduce to solitude”, and so on. It was certainly no coincidence that the Antichrist is also called “the abomination of desolation” (Daniel 11:31, 12:11; Matthew 24:15). In January, the Frankfurt news in the Nouveau Journal Universel announced: “On a jamais vû une plus grande désolation que celle que les François causent dans tout notre Voisinage” (“We have never seen a greater desolation such as the one caused by the French in our entire neighbourhood”). In February, the Mannheim news of the Nordirscher Mercurius reported: “Das Verwüsten hat leyder hier noch kein Ende” (“The Desolation here has unfortunately still no End”). In August, the Frankfurt news of the Relations Véritables related: “On vient de recevoir âvis que les François portent par tout la desolation” (“We have been informed that the French are carrying Desolation everywhere”).78

And the same term was used in the previously quoted seventh issue of the Lettres sur les matières du temps. Whether the choice of words was deliberate or unconscious is hard to tell. What is certain is that first this vocabulary was employed in all newspapers, protestant as well as catholic, to report war and military violence. It was not a new vocabulary but it gradually came to be attached to the French military operations. Second, this shared vocabulary seemed to make sense for the early modern reader. This news-writing was

78 NJU, 19 (20 January 1689); NM, 27 (15 February 1689); RV (24 August 1689).
consistent with an eschatological interpretative pattern which comprehended the enemy as the Antichrist. This old rhetorical and interpretative pattern was revived during the Sun King’s reign and reached its apogee during the Nine Years War. Both in England and in the Holy Roman Empire, Louis xiv was identified with the Antichrist.79 But above all, this eschatological interpretative pattern had the advantage of providing a potential non-confessional rhetorical point of agreement for a profoundly heterogeneous rising opposition to Louis xiv and a fortiori, in wartime, allies against the Sun King. Primarily defined by his corrupt doctrine, the Antichrist could also be identified by his cruelty and bloodlust. Besides the confessional stakes of the war, which maintained all their importance in the domestic debates, the eschatological frame of reference, thanks to its polemical flexibility, made it possible to overcome doctrinal differences on the international stage and offered a common interpretative pattern to articulate and to denounce the French military operations.80

Furthermore, this denunciation mobilised another interpretative pattern, which benefited from the same polemical flexibility and seemed to have become, at the end of the seventeenth century, a shared frame of reference, namely the ideal of justum bellum (or just war) and the still imperfectly formalised laws of war.81 The result of an old theological and juridical debate, the

80 Claydon, Europe and the Making of England, p. 188.
ideal just war was based on the principle that war was subject to moral and customary laws (i.e. laws of war), human and Christian, defining a *jus ad bellum* (laws governing the right to make war) and a *jus in bello* (laws in wartime) that Louis XIV’s army would have infringed.82 From the first printed news of them, the French military operations were denounced—implicitly or explicitly—in these terms. After having related “the late Desolation that has been made in the Cities of the Palatinate”, the fictional correspondent of the *Lettre sur les matières du temps* stated that men were “ever laying a great Stress upon the Right which Justice gives, whether in Matter of War, or in Matter of Peace”, and “it is also upon this Foundation, that War has its Laws as well as Peace, not only for the undertaking with Justice and Necessity; but also for the Executing it with Religion and Circumspection, with respect of the Bounds prescribed by common Custom”. Before directly commenting on the French military operations, he concluded: “so there is no subverting the Laws established in Military Executions, without making War a perpetual Theatre of Confusion and Horror”.83 Hence the denunciation of the French military violence took the form of a rhetoric of indignation, of a denunciation of an offence to justice, i.e. to the laws of war and the ideal of just war. Moreover, this rhetoric of indignation was also a rhetoric of scandal.84 Indeed, it implied a transgression which threatened the established order and therefore (re)instituted the community, specifically by representing this community as united by an

---

apparently unanimous indignation based on the laws of war and the ideal of just war. And at a time where Europe as an idea was gaining ever more coherence and was more and more frequently invoked, beginning to be used as a legitimating figure, the authors adopted a kind of European posture or literary posture of Europe. Relating and denouncing the French military operations gave them an opportunity to conceptualise Europe as a whole defined by an attachment to, and a respect for, the laws of war which, they claimed, were held in common. Authors staged and personified Europe as a scandalised—and thus united—community brought together under a shared ideal of just war. Hence the author of the *Vérité chrestienne* described a fictional audience of Truth tasked with pleading Justice’s cause in the name of an indignant Europe before the Sun King. In the introduction, Truth declared:

*Europe* (Sir) asks you the reason why so many Infants crush’d Under the Ruins, or devour’d by the Flames? *She* demands the reasons of many more of your execrable Barbarities, which cannot be express’d, the very thoughts whereof would fill with horror the most Savage Nations, and Sworn Enemies of God Almighty

This generalisation represents a Europe that is shocked, indignant, accusing, and scandalised. In fact, the aversion was at first individual and private, as in the abundant correspondence of the Princess Palatine, sister-in-law of Louis XIV, in whose name he claimed territories in the Palatine Electorate. On 20 March 1689, she wrote to her aunt, Electress of Hanover, of the “horror” (“Abschew”) she felt for “all the desolation” (“alle die Verwüstung”).

---

86 We quote here the English translation: *A New Declaration*, p. 2. For the other versions: *La Vérité Chrestienne*, pp. 4–5; *De Christelyke Waerheyt*, p. 4; *Der Christlichen Warheit*, p. 2.

author of the *Lettres sur les matières du temps* asserted at the same time that “letters from that Country [the Palatinate] tell us, That several of those very Persons that have been the Instruments of this sad Spectacle, have had it in such abhorrence, as to make it plain, that with Regret they executed the Orders of the Court.” The “impartial pen” of the *Europäischer Mercurius* called for indignation and declared that: “es seynd diese barbarisch- und unmenschliche Proceduren in den Pfaltz/ die billig einen äussersten Eckel und Abscheu wider die Frantzösische Nation bey jederman verursachen sollten” (“the barbaric and inhuman conduct in the Palatinate must reasonably cause everyone an extreme revulsion and horror for the French Nation”). But the shift towards Europe had already begun and the European posture became a *topos* of the event. One month later, the *Mercure historique et politique*, the most famous “historical and political *mercure*” of the time written by Gatien Courtiz de Sandras, related: “Qu'elle douleur pour [les honêtes gens François] de voir le nom François devenir l'horreur de toute l'Europe” (“What a pain for [the honest French people] to see the name French becoming the horror of all Europe”). Fifty years later, in a famous turn of phrase, Voltaire wrote that “L’Europe en eut horreur” (“All Europe beheld this action with horror”).

Perhaps Voltaire found inspiration for this phrase in the De Limiers’ *Histoire de Louis xiv* to which he referred several times in his marginal notes. De Limiers in turn borrowed it from the *Mémoires et réflexions sur les principaux événements du règne de Louis xiv* of De La Fare. Moreover

---

92 [De Limiers], *Histoire de Louis xiv*, p. 403: “Cette barbarie inspira de l’horreur à toute l’Europe, contre le Roi, & contre toute la Nation Françoise”. (“This barbarity inspired all Europe with horror, against the King, & against all the French Nation.”)
93 [Charles–Auguste de La Fare], *Mémoires et réflexions sur les principaux événements du règne de Louis xiv*, Et sur le caractère de ceux qui y ont eu la principale part. Par Mr. L. M. D. L. F. (Rotterdam, 1716), p. 246: “Quoi qu’il en soit, cette cruauté inspira de l’horreur à toute l’Europe contre le Roi, & contre toute la Nation”. (“Be that as it may, this cruelty inspired all Europe with horror against the King, & against all the Nation”).
this play of borrowing, typical of the historical writing of the time, originated in printed news.\textsuperscript{94} Indeed, that De Limiers was the biographer of Tronchin du Breuil undoubtedly explains why he used the \textit{Lettres sur les matières du temps} in particular, and not another source, to write his \textit{Histoire de Louis XIV}.\textsuperscript{95} But this use of a periodical as a source for historical writing attests to a fundamental practice of the historical writing of the time. In fact, there was a structural continuum between printed news and history.\textsuperscript{96} Hence in his \textit{Histoire de la guerre de 1741}, Voltaire observed that: “Des compilations de gazettes et des journaux sous cent titres différents forment presque la seule histoire des changements arrivés de nos jours”. (“Compilations of gazettes and periodicals under thousands of different titles make up almost the only history of changes that occur in our time”).\textsuperscript{97} As the continuous pagination of the \textit{Nouveau Journal Universel} indicates, some newspapers were designed to be compiled in volumes. Moreover the founders of the “historical and political mercures” grasped and fully assumed their potential historical function. They aimed at going beyond the ephemeral nature of the news to write “a narrative of the ongoing event” that formed a “history of the European present time” (“histoire du temps présent européen”).\textsuperscript{98} So from the beginning, these mercures were editorially designed to be ultimately compiled and hence to be read as an historical continuity.\textsuperscript{99} In this regard, the role played by the “primary narrative” of the French military actions that was formed by printed news was all the more essential in their historical inscription as a singular event. The French-language histories of the Sun King’s reign published abroad from the eighteenth century bear witness to this crucial role. The German-language historical writing of the Desolation follows similar mechanisms. A historical calendar published in 1691 included a version of the Heidelberg’s account under the title “Unherhörte

frantzösische Grausamkeit in der Pfalz” (“Unheard–of French Cruelty in the Palatinate”). Likewise versions of this account were published both in the thirteenth volume of the famous chronicle Theatri Europea in 1698—this time under the title “Grausamkeit des Comte de Melac in der Pfalz” (“Cruelty of the Comte Melac in the Palatinate”)—and in the second volume of the no less famous Historischen Labyrinth der Zeit in 1701—this time under the title “Der in der Pfalz mit Brand und Mord wütende Graf von Melac, Frantzösischer Brigadier, Anno 1689” (“The Comte of Melac, French Brigadier, raging with Fire and Death in the Palatinate, Year 1689”). All these uses endorse and strengthen the exemplary representativeness of Heidelberg and Mélac, as well as the focus on the Palatinate. Through similar mechanisms, it is no coincidence that the vocabulary of fire and desolation used by printed news to relate the French operations became a component of the event's name: variously the “Desolation of the Palatinate”, “Verwüstung der Pfalz”, “incendie du Palatinat” or “embrasement du Palatinat”.

As soon as the French strategy was implemented, the question of its historical representation was raised. In a letter to Louvois on 21 May, the Duc de Duras, commander of the French army in the Rhenish territories, had already concerns for: “le mauvais effet qu'une pareille désolation pourroit faire dans le monde pour sa réputation et pour [la] gloire [de sa majesté]” (“the bad effect that such desolation could have in the world on [her Majesty’s] reputation and glory”). And a few months later, in a German brochure called Concursus creditorum that represented the trial of Louis XIV before Apollo on Mount Parnassus, the Palatinate's inhabitants declared that:

Es bleibt uns nicht übrig/ als daß wir zu ewigen Zeiten ein Spectacul seyn der Frantzösischen Brutalität/ und daß wir durch gantz Europa/ wowir auch zertreuet sind/ umb Rache schreyen/ zu dem der da ausdrücklich sagt: Mein ist die Rache.

(All that remains is for us to be for eternity a sight of the French brutality and to scream for revenge everywhere in Europe, wherever we are scattered, to the one who said expressly: Vengeance is mine.)

100 Alten und Neuen Styli Sonderbahrer Historien–Calender Auff das Jahr Christi/ 1691 (Hamburg, [1690]).
With this case of the refugees, we see the shift from what happened to what the news reported, and then to what the pamphleteers sought to effect historically by the act of writing. Hence in his last sentence, Apollo orders that French glory should sink into oblivion and that the perpetual narrative of the horrifying and cruel acts committed by France darken her history from that point on.

Although the coherence of the official French propaganda was (ironically, as Peter Burke has underlined) an undeniably crucial factor in the coherence of the printed opposition against Louis XIV, this coherence also resulted, as Joseph Klaits has suggested, from European news networks. But the event-building process of the French military operations was certainly not uniform. Although it was undoubtedly characterised by a European dimension, this transnational scale was based on and interacted with domestic scales, which were dealing with the military operations in their own terms and influenced in turn the cross-border processing of the event.

From a certain perspective, Apollo’s wishes were partly granted. Although the Sun King did not lose all his glory, he also became “celui dont les armées embrasèrent le Palatinat” (“the one whose armies ravaged the Palatinate”). In the long term, the event has been (re)appropriated in numerous times and spaces: for instance, these (re)appropriations had a part in constituting the trial of the monarchy during the French Revolution, in Franco-German relations and the building of the German nation state from the Napoleonic wars to the Interwar period, and in debates over the Irish question in the British Empire. As soon as the French military operations occurred, printed news contributed both to their representation and the building of the historical object of the “Desolation of the Palatinate” itself, an object that has become a true “figure of the narrative”, epitomising the Sun King’s reign and rapidly becoming a signifier of the horror of war.
