About PDFReactor

RealObjects PDFReactor is a powerful formatting processor for converting HTML and XML documents into PDF. It uses Cascading Style Sheets (CSS) to define page layout and styles. The server-side tool enables a great variety of applications in the fields of ERP, eCommerce and Electronic Publishing.

PDFReactor supports HTML5, CSS3 and JavaScript.

It allows you to dynamically generate PDF documents such as invoices, delivery notes and shipping documents on-the-fly. PDFReactor allows you to easily add server-based PDF generation functionality to your application or service. Since PDFReactor runs on a server, the end-user in general does not need any software other than a PDF viewer.

Late Samaritan Hebrew

A Linguistic Analysis of its Different Types

Author: Moshe Florentin

This book provides a comprehensive grammatical and lexicographical review of all types of late Samaritan Hebrew in all their literary manifestations from the twelfth century to the present. Much of it is devoted to description of Hybrid Samaritan Hebrew (HSH), which since the 13th is used as the main written language of the Samaritan community. The whole research is based on study of a wide range of texts. All available liturgical material was computer-recorded and then analyzed. A vast array of chronicles, colophons and deeds of sale copied from manuscripts were also computerized. Included as well are unpublished manuscripts of prayers. Audio recordings and phonetic transcriptions were made of dozens of Samaritan prayers and piyyutim, and served as a database for the phonological and the morphological analysis of the language.

Biographical Note

Moshe Florentin, Ph.D. (1989) in Hebrew, Tel Aviv University is an Advisory Member in the Academy of the Hebrew Language. He has been teaching Hebrew and Aramaic at Tel Aviv University since 1979 and has published extensively on Samaritan languages including *The Tulida - A Samaritan Chronicle* (Jerusalem, 1999).
