About PDFReactor

RealObjects PDFReactor is a powerful formatting processor for converting HTML and XML documents into PDF. It uses Cascading Style Sheets (CSS) to define page layout and styles. The server-side tool enables a great variety of applications in the fields of ERP, eCommerce and Electronic Publishing.

PDFReactor supports HTML5, CSS3 and JavaScript.

It allows you to dynamically generate PDF documents such as invoices, delivery notes and shipping documents on-the-fly. PDFReactor allows you to easily add server-based PDF generation functionality to your application or service. Since PDFReactor runs on a server, the end-user in general does not need any software other than a PDF viewer.

The Roman *Collegia*

The Modern Evolution of an Ancient Concept

Author: Jonathan S. Perry

This volume maintains that contemporary events, ideologies, and institutions have shaped so much of the work on the ancient Roman *collegia*, a group of institutions known principally from epigraphic and legal sources. It traces the origins of thinking on the subject from the creation of the *Corpus Inscriptionum Latinarum* through the political and social movements of the 19th and 20th centuries in Western Europe. The bulk of the book focuses particularly on the intersection of scholarship and economic theory in Fascist Italy, as the *collegia* were analysed by the Istituto di Studi Romani, incorporated into the *Mostra Augustea della Romanità*, and ultimately championed by the Minister of National Education, Giuseppe Bottai, in 1939.

Readership

All those interested in the history of scholarship in modern Europe and the politicisation of culture in Fascist Italy, as well as specialists in ancient Roman history and Latin epigraphy.

Biographical Note

Jonathan S. Perry, Ph.D. (1999), University of North Carolina—Chapel Hill, is an Assistant Professor of History at the University of Central Florida. He has published several articles, particularly on the interpretation of ancient history in the modern world.
