

FUNCTIONAL MORPHOLOGY OF THE HEAD OF
THE PERCH (*PERCA FLUVIATILIS* L.):
AN ELECTROMYOGRAPHIC STUDY

by

J. W. M. OSSE

CONTENTS

I. Introduction	290
II. Material	292
III. Structure	293
A. Osteology	293
The neurocranium	293
The circumorbital bones	294
The suspensorium	295
The upper jaw	297
The lower jaw	298
The opercular series	299
Bones of the hyoid and branchial arches	300
The hyoid arch	300
The branchial arches	301
The pectoral girdle	301
The pelvic girdle	302
B. Myology	302
The jaw muscles	303
The muscles of the suspensorium	307
The opercular muscles	309
The ventral head muscles	311
C. Connective tissue elements	318
Connective tissue elements in the snout region	318
Connective tissue elements on the dorsal side of the upper jaw	318
Connective tissue elements between the suspensorium and the cerebral skull	319
Connective tissue elements in the opercular region	319
Connective tissue elements on the ventral side of the head	320
IV. Electromyography and its applicability to problems of functional morphology	321
V. Techniques	324
a. Aquarium	324
b. Electrodes	325
c. Insertion and localization of the electrodes	325

d. Connection between fish and apparatus	326
e. Apparatus	327
f. Cage	328
g. Discussion of the technique	328
h. Sources of errors	329
i. Motion pictures	330
VI. Pattern of movement and muscle activity during respiration	331
A. Experimental results	333
The inspiratory muscles	334
The expiratory muscles	336
The opening of the mouth	337
The m. geniohyoideus	339
B. Concluding remarks	345
VII. Pattern of movement and muscle activity during coughing	347
A. Experimental results	348
Electromyographic results	348
Movements	349
Discussion	352
Variations in the activity period of certain muscles	353
The function of coughing	355
B. Concluding remarks	356
VIII. Pattern of movement and muscle activity during feeding	356
A. The food of the perch	357
B. Experimental results	358
Movements of the fish during feeding	358
Electromyographic data	361
Discussion	363
Feeding on earthworms	370
Delimitations of movements during feeding	370
C. Some general considerations	371
IX. Form and function	372
A. Functional components	373
Dominance of functions	374
The prerequisites for the feeding function	375
B. Muscle architecture as a consequence of functional demands	379
The m. add. mandibulae	380
The m. intermandibularis	381
The m. sternohyoideus	382
C. The articulations of the hyomandibula	383
D. Concluding remarks	384
X. Summary	385
Acknowledgements	386
References	387
Key to lettering of figures and plates	390

I. INTRODUCTION

At first glance, a mounted skeleton of a teleost fish shows a complicated array of little bones with complicated shapes and a large number of joints between them. By comparison, the skull of a mammal is a solid
