Terrestrial Arthropod Reviews

Concise Review Articles on Insects, Spiders and Their Relatives Living on Land
Terrestrial Arthropod Reviews

Concise Review Articles on Insects, Spiders and their Relatives Living on Land

Aims and Scope

Terrestrial Arthropod Reviews contains concise review articles on living and extinct insects, arachnids, and their relatives that use land during (a part of) their life history.

Instead of requesting a historic, exhaustive overview of all aspects of a particular subject matter, Terrestrial Arthropod Reviews (TAR) aims to provide space for critical thinking and thought-provoking questions. The journal welcomes integrative reports on findings within a certain habitat or organism, but beyond the taxonomic description. Reports on species-species or species-environment interactions as well as biodiversity, conservation biology and the effect on habitats of ecological changes are especially welcome.

New species descriptions, taxonomic revisions, or new records are specifically excluded.
